4. The following is an examiner's statement of reasons for allowance: The IDS filed on 10/29/07 and the prior arts fails to teach a liquid crystal display device having a data transmission system, comprising a mode controller receiving video data having a first set of three video signals of odd data and a second set of three video signals of even data and outputting a control signal in accordance with a number of data transitions of the video data; a data transmitter coupled to the mode controller,

selectively inverting video data in response to the control signal from the mode controller and outputting selectively inverted data; a data receiver coupled to the data transmitter and outputting reconstructed data corresponding to the selectively inverted data and the control signal; and a data driver converting the reconstructed data into an analog signal and outputting the analog signal to a liquid crystal panel as claimed in Claim 42.

5. The IDS filed on 10/29/07 and the prior arts fails to teach a liquid crystal display device having a data transmission system comprising: a mode controller receiving video data having a plurality of bits and outputting a control signal in accordance with a number of data transitions of the plurality of bits of the video data; a data transmitter coupled to the mode controller and outputting first data corresponding to the video data and the control signal from the mode controller; and a data driving circuit having a data driver and a data receiver coupled to the data transmitter, the data receiver selectively inverting the first data in response to the control signal, and the data driver converting the selectively inverted first data into an analog signal and outputting the analog signal to a liquid crystal panel, wherein the data driving circuit is integrated in one unit and electrically connected to the data transmitter with a flexible printed circuit film as claimed in Claim 47.
